Faculty introduction(Educational achievements)

<p>Name</p> <p>Nishida Eri</p>	<p>Position</p> <p>Associate professor</p>	<p>Affiliation(Department, etc.)</p> <p>Department of Regional Collaboration / Nutrition and Food Science course</p>
<p>Education philosophy (Message to students)</p> <p>A dietitian who is responsible for protecting the health of people is a very attractive profession. Dietitians are active in various places such as nursery schools, kindergartens, schools, hospitals, facilities for the elderly, and food companies. In order for students to become a dietitian who can play an active role in society, I would like to give lessons that teach students to think about what they can do and what they should do. In addition, I hold qualifications for employment support (Employment counsellor (national qualification)) and provide support that leads to the career development of students.</p>		
<p>Educational responsibilities</p> <p>Subjects Nutrition Education I / II, Nutrition Education Practice I / II, Public Nutrition, Practical Training I / II, Practical Training Before / After Guidance, Dietitian theory, General Practice B / C, Region and people, Food Science I / II (confectionery) Course)</p> <p>Educational activities As the head of the Nutrition and Food Science course, I will support each student by making use of my experience as a class advisor. I also help improve the situation of students by supporting the teachers who are assigned as class advisors.</p> <p>I also work with parents to provide ongoing support for all students in the course to achieve their graduation goals.</p> <p>3 policies and Educational activities Regarding II "Reliable specialized knowledge and skills" in the Diploma Policy, I am in charge of subjects related to specialized knowledge such as "Nutrition Guidance Theory (Presentation)" and "Public Nutrition". In III "Communicative Competence", I am also in charge of practical training subjects such as "Nutrition Counseling Practice I / II". Regarding IV "problem solving ability" and V "ability to learn independently", and I am in charge of comprehensive subjects such as "off-campus training I / II" and "General exercises B / C".</p>		
<p>Education method</p> <p>Handouts are distributed in advance to prepare for class, and the lessons are conducted according to the textbook. By providing opportunities for review even after class, we create a series of steps to find out what students do not understand, solve it in class, and establish it in the process of review..</p> <p>The goal is to provide an opportunity to review the whole thing before the exam and to acquire the points that should be acquired as a dietitian.</p>		
<p>Evaluation by others</p> <p>In lesson evaluations from the students, they were generally satisfied, and the majority of my classes were evaluated as 80% or better by the students.</p> <p>I also received positive feedback in peer reviews. On the other hand, there are various opinions about the extent to which teachers should guide students, and I would like to explore these methods in future educational activities.</p>		
<p>Student achievements</p>		

<p>As an activity related to dietary education necessary for dietitians, we are planning and implementing dietary education courses for the community. Every year, student-centered courses are held three to four times, providing a place to showcase the learning outcomes to the community. We plan to implement infection prevention measure training against coronavirus.</p> <p>All second-year students took the off-campus training, which is essential for training dietitians, and achieved good results at each facility.</p>																				
<p>Future goals (short term and long term)</p> <p>Short term: I want to send students who have acquired the knowledge and skills that they should acquire as a dietitian into society.</p> <p>Long-term: I would like to continue to train dietitians who can meet the needs of the region by gaining the necessary experience for dietitians through various community activities as well as classes.</p>																				
<p>Specialized field (academic field / major)</p> <p>Nutrition education, dietary education, health psychology</p> <p>Research theme (research area)</p> <p>Examination of methods for continuous dietary education promotion in infant facilities, Food education in the community, improvement of basic skills of working adults through food education activities, literacy on eating disorders</p>
